

Heber City Begins Work on Improving Water System

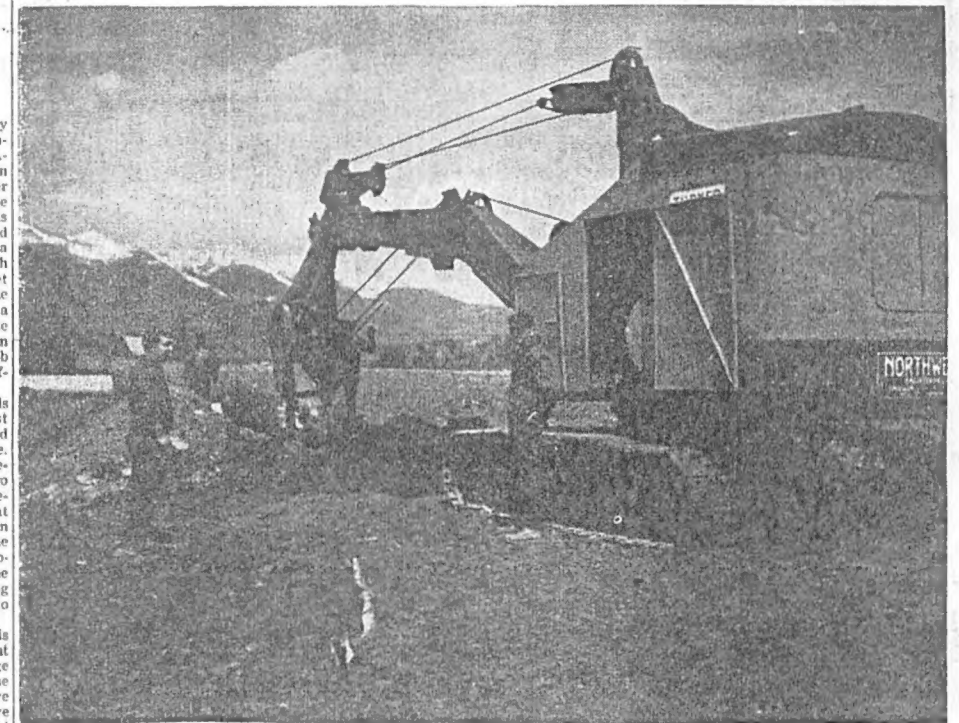

First Stage in Project Now Underway

Turner Construction Company of Salt Lake City began the initial construction Saturday, April 25 on the first phase of an improvement plan to the Heber City culinary water supply. The work being done by Turner's as reported by the Mayor and Council members is digging a trench and laying of a 16-inch pipe approximately 1,450 feet from the large reservoir to the upper Broadhead spring in a direct line. This is being done on an emergency basis at an hourly basis cost and no job bidding or contracting was offered.

ADVERTISEMENT FOR bids on the remainder of this first phase has been done and bid opening is in the near future. This work will include the design of a replacement of two private pumping stations, rebuilding the collection boxes at the springs, chlorination station and new pump house near the large reservoir, desanding process, revision of piping in the reservoir area and connecting the large reservoir directly to the city main line.

This first phase of work is planned and being carried out to eliminate a series of large leaks in the lines from the springs to the reservoir, remove sand from the system and give some increase in pressure. At a later date, when plans for the entire system are completed, the community will be given an opportunity to review the proposal in its entirety.

CITY OFFICIALS HAVE indicated they are aware of several areas still wasting water with open houses, continuous running of water for stock watering and numerous leaky and broken lines on private and city property.

REPAIR SPRING FEEDER LINE— Equipment of Turner Construction Company has been laying a new pipeline from the upper Broadhead Spring to the Heber City Culinary Water Storage Tanks. City Councilman Smith observes.
